Reports Analytics EN ES FR

World Animal Health Information System

OIE-WAHIS (OIE World Animal Health Information System) is the centralised system through which OIE Members disseminate information on animal health and veterinary services. It contains data on OIE-listed diseases in domestic and wild animals.

All this information replaces and updates all reported data from the mapping tool officially validated by the OIE.

**Immediate Notifications**  
**Follow-up Notification**  
**Six Monthly Report**  
**Annual Report**

The database is updated by the Member countries on a regular basis.

WAHIS provides access to a wide range of interactive features for the collection of data.

# Main Roles of OIE Reference Laboratories for ASF

To provide OIE Members with

- Biological reference products and facilities for diagnostic tests
- Technical and scientific advices on the diagnostic methods and disease control measures
- Scientific and technical training for personnel of OIE Member Countries
- To organise inter-lab proficiency tests

# LSD Communication Materials

## Lumpy skin disease a new threat to the region

Lumpy skin disease (LSD) is a viral disease of domestic cattle, water buffaloes and certain wild ruminants. Its incubation period is about 28 days but experimentally infected cattle may develop clinical signs as early as 6-8 days. This disease heavily impacts animal health and welfare and can lead to severe economic losses in affected farms.

LSD has recently spread to and within Asia, posing a threat to your country.

**How do animals get infected?**

- Mainly by blood-feeding arthropod vectors.
- Through bringing in infected cattle from affected regions.

**When to suspect LSD?**

- Ocular (eye) and nasal discharge – usually observed first.
- Decreased milk yield in lactating cattle.
- High fever that may exceed 41 °C or 105 °F.
- Enlarged submandibular and preorbital lymph nodes (swollen glands).
- Appearance of firm cutaneous nodules of 2-6 cm in diameter, particularly on the head, neck, limbs,udder, genitalia and perineum within 48 hours of onset of fever.
- Number of nodules varies from few in mild cases, to multiple lesions in severely affected animals.

**What to do in case of LSD suspicion?**

- Contact the Veterinary Services:
- Prevent further spread of the disease by asking the animal owners/keepers to:
  - Separate the suspect herd from the rest of the farm.
  - Separate the rest of the animals that neighbouring herds are using communal grazing.
  - Stop cattle movement from/to the farm.
  - Limit visitors to essential services.
- Carry out clinical examinations on the rest of the animals, in order to identify the disease at very early stages.
- Provide supportive treatment to affected animals to reduce the fever, maintain hydration and prevent secondary bacterial infections.
- A vaccine exists to protect the cattle. Contact the Veterinary Services for more information on the vaccine.

## Protecting your animals from Lumpy skin disease

Lumpy skin disease (LSD) affects cattle and water buffalo. It is currently spreading in Asia affecting animal health and welfare, livelihoods, and food security.

**LSD poses a threat to your animals.**

**How your animals can get infected?**

- Mainly by biting insects such as mosquitoes, stable flies and ticks.
- By moving infected cattle from an area where the disease is present.

**When to suspect LSD?**

- Discharge from eyes and nose.
- High fever.
- Decreased milk yield in lactating cows.
- Appearance of firm cutaneous nodules, usually noticed first on head and neck.
- Number of nodules varies from few in mild cases to many covering the entire body in severe cases.

**What to do in case of LSD suspicion?**

- Notify immediately to the local veterinarians or official Veterinary Services.
- Separate suspected cases from the rest of the herd.
- Monitor the health of animals everyday in order to identify sick animals.

**How to prevent and control LSD in your farm?**

- Only buy healthy animals from trusted sources.
- Keep farm sheds free from breeding sites for insects such as standing water and dung.
- A vaccine exists to protect your animals. Contact your local veterinarian or official Veterinary Services for information on the vaccine.
