Step 1: List of indicators

- Identify the data needed to be collected for likelihood estimation

- Virological data
- Clinical data
- Epidemiological data
- Trade data
- Population data
- ...

- Under each pathway and each event

Step on risk pathway (example P1)	Indicators/variables
P1.1: Pig farm selected for trading	<ul style="list-style-type: none"> • Countries of origin of live pigs • Number of pig farms providing pig for exportation to my country • Farm types and farm biosecurity level of imported pigs (commercial – backyard) • Number of ASF outbreaks/Prevalence of ASF in the exporting country. Is there any difference between farm type? • Surveillance data and protocol from exporting country
P1.2: Pig(s) selected for legal export	<ul style="list-style-type: none"> • Proportion of pigs selected for exportation in the farm • Prevalence of ASF in farms in case of infection
P1.3: Pig(s) survives transport to pre-export checks	<ul style="list-style-type: none"> • Way and duration of transport • Incubation period, symptomatic period, morbidity and mortality rate
P1.4: Pre-export checks/testing of pig(s)	<ul style="list-style-type: none"> • Export data (national data, certificates from the exporting countries) • Are pigs observed/tested before crossing the border? • What are the observations/tests? Clinical signs, laboratory test, ... Sensitivity and specificity of this surveillance • Proportions of observed/tested animals
P1.5: Pig(s) survives transport to destination country	<ul style="list-style-type: none"> • Way and time of transport • Incubation period, symptomatic period, morbidity and mortality rate
P1.6: Destination border checks/testing	<ul style="list-style-type: none"> • Importation data (national data, certificates from the exporting countries) • Are pigs observed/tested after crossing the border? • What are the observations/tests? Clinical signs, laboratory test, ... Sensitivity and specificity of this surveillance • Proportions of observed/tested animals

Step 2: Collection of available data

- A large amount of data is already available
- Sources of data
 - Peer-reviewed (pubmed, google scholar)
 - International agencies: OIE, FAO, WTO
 - Regional reports: ASEAN
 - National reports
 - NGOs reports
 - Journal news

African Swine Fever

Desk Review

in collaboration with Cornell University

National reports

- Identification of the agencies who can have the necessary data
 - Customs
 - Department of agriculture
 - Department of trade
 - Associations and groups of workers (Farmer associations)
 - NGOs working in agriculture
 - NGOs working in wildlife
 - ...
- Retrieve national reports

Jockey Club College of Veterinary
Medicine and Life Sciences

香港城市大學
City University of Hong Kong
in collaboration with Cornell University

Step 3: Identification of knowledge gaps

- Types of gaps
 - Data unavailable
 - Data not recent/need to be updated
 - Data not accurate
 - Evaluate methodology and source
 - Peer reviewed vs grey literature
 - Surveillance data vs investigation data

Choice of the method

Sociological approach

Using a sociological approach to Animal Value Chain Analysis for risk management. A synthetic example.

Webinar #5 and #7

Participatory epidemiology

Methods of collection of qualitative data in order to quickly understand a situation and built an action plan

Jockey Club College of Veterinary Medicine and Life Sciences
香港城市大學
City University of Hong Kong
in collaboration with Cornell University

Choice of the method

Closed ended questionnaire	Participatory tools
Quantitative data	Qualitative data
Individual answer	Focus group
Randomly selected	Key respondent
Statistics	Triangulation
Questionnaires	Visualization/ranking
Recognized as scientific and accurate	Often not recognized as scientific
Long and costly	Fast and cheap
Control of the data	Unexpected answer

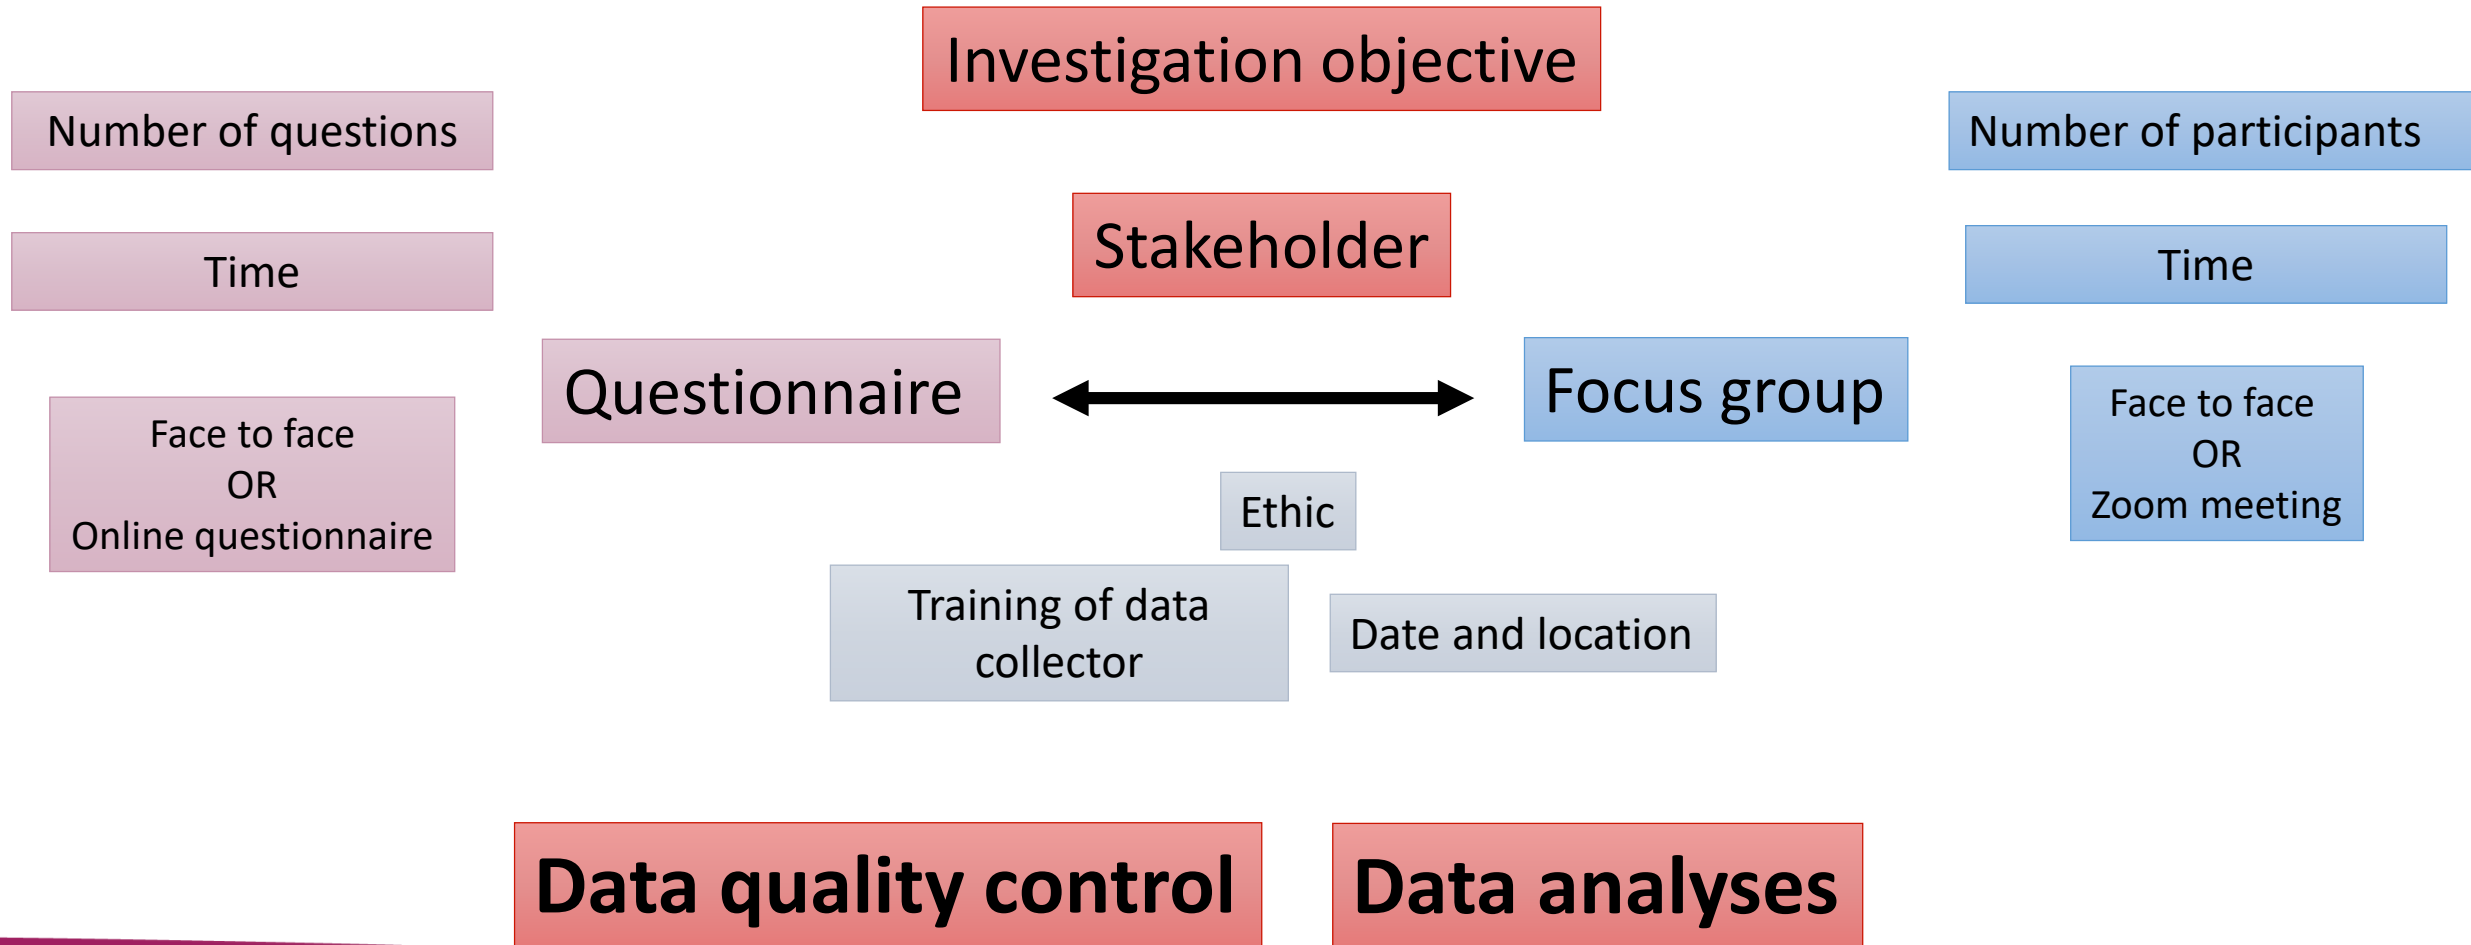

Jockey Club College of Veterinary
Medicine and Life Sciences

香港城市大學
City University of Hong Kong
in collaboration with Cornell University

Write the protocol

Close-ended questionnaires

- Phrase the questions
- Type of answers
 - Categorical: Yes/no, multiple-choices, ranking
 - Quantitative: precision
- Order the questions
- Keep some opening (other, comments,...)
- What is the point to collect all data possible
 - E.g., number of cats in the house for ASF investigation
- Test the questionnaire

Participatory epidemiology

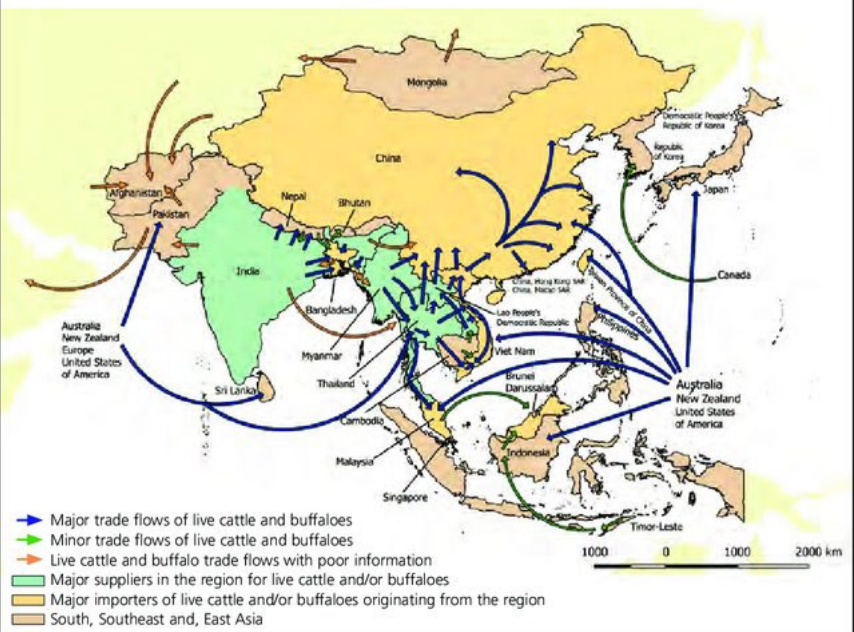

- Triangulation
- Flexibility: analyses of the data during the data collection
- Tools
 - Semi-structured interview of key stakeholders: discussion with guide
 - Visualisation methods
 - Ranking methods

Bellet et al, 2012

Visualisation

- Maps/Transects
- Proportional piling
- Venn diagrams
- Calendars

	Importers	Cambodia	China	Indonesia	Lao	Malaysia	Myanmar	PNG	Singapore	The Philippines	Thailand	TL	Vietnam
Exporters													
Cambodia									N				
China									N				
Indonesia									Legal				
Lao									N				
Malaysia									Legal				
Myanmar									N				
PNG									N				
Singapore													
The Philippines													
Thailand							Legal		N				
TL									N				
Vietnam									N				

Ranking

- Identifies the several answers to the question
- Comparison of the answers
- Ranking of the answers from most to least relevant/important

Signs	Diseases				
	Gandi Trypanosomiasis	Hogyle Foot-and-mouth disease	Bulu Haemorrhagic typhus	Sambu Contagious bovine pleuropneumonia	Madibesa Rinderpest
Chronic weight loss (W=0.59 ^{***})	4.5 (3.5-6.0)	1.5 (0-3.0)	0 (0-0.5)	11.5 (7.5-14.5)	0 (0-3.0)
Animal socks shade (W=0.59 ^{***})	1.0 (0-3.5)	15.8 (10.0-20.0)	1.5 (0-4.0)	1.0 (0-4.0)	0 (0-0)
Diarrhoea (W=0.78 ^{***})	3.0 (1.0-5.5)	0 (0-0)	5.5 (3.0-8.5)	0 (0-0)	12.5 (8.5-15.5)
Haemorrhagic caecum (W=0.83 ^{***})	3.0 (0-5.0)	0 (0-0)	17.0 (15.0-20.0)	0 (0-0)	0 (0-0)
Coughing (W=0.96 ^{***})	4.25 (2.5-6.5)	0 (0-0)	1.0 (0-2.0)	14.5 (12.5-16.5)	0 (0-0)
Reduced appetite (W=0.26 [*])	5.25 (3.0-7.5)	6.0 (3.0-9.0)	2.5 (0-4.5)	3.0 (0.5-8.5)	1.5 (0-2.5)
Loss of tail hair (W=0.65 ^{**})	14.2 (10.0-19.0)	0 (0-0)	0 (0-2.5)	0 (0-0)	3.5 (0-7.0)
'Death is sudden' (W=0.78 ^{***})	0 (0-3.5)	0 (0-0)	17.5 (13.5-20.0)	0 (0-0.5)	0 (0-1.5)
Oedematous caecum (W=0.46 ^{***})	11.0 (5.5-17.5)	0 (0-0)	0 (0-5.0)	4.0 (0-10.0)	0 (0-0)

Example: We want to evaluate the sensitivity of the check of live pigs at the border

Focus group: Agents of customs

- 1) List of clinical signs they check for African Swine Fever
- 2) Between red spot on the ear and fever, what is the most important/feasible to check (do that for all combinations)
- 3) Comments about if one clinical sign only: test or not test?
- 4) Rank: prioritization of the clinical signs

*Step 4
Investigation and
survey*

*Step 5
Data analyses and
report*

Jockey Club College of Veterinary
Medicine and Life Sciences

香港城市大學
City University of Hong Kong
in collaboration with Cornell University

Step 5: Data analyses and report

- Objective: Present all data available and all data non available to the RA team/Expert group/Scientific experts
- Data entry: Keep a trace of all the sources and information you collected
- Data analyses: interpret individual investigation and several investigations together

Jockey Club College of Veterinary
Medicine and Life Sciences

香港城市大學
City University of Hong Kong
in collaboration with Cornell University

Identify the biases of the data collection

- Data collection bias:
 - Appreciation of strengths and limitations of data sources
 - Spatial and time bias: change over time
 - Participant selection
 - Cultural/Gender/Political bias
 - Partial data

All biases have to be in the final report

Jockey Club College of Veterinary
Medicine and Life Sciences

香港城市大學
City University of Hong Kong
in collaboration with Cornell University

Data quality control and uncertainty

- Detect discrepancies and missing data
- Document uncertainty and document our assumptions
- Acknowledge the “Don’t Know”

“What we do know and what we do not know”
Dr. Kim

All data including
discrepancies and missing data
have to be in the final report
