

FMD SITUATION
(Jan 2020 to June 2021)

FMD outbreaks and serotype distribution 2020.1-2021.6

FMD epidemic strains in P. Malaysia 2020.1-2021.6

There were 68 outbreaks from January 2020 to June 2021, of which all were FMDV serotype O. Affected animals were cattle (96%) and buffalo (4%). Outbreaks involving all states in P. Malaysia with highest number reported in the state of Pahang.

Peninsular Malaysia

- FMD vaccination strategic
- Awareness campaign on FMD control measures, Biosecurity, vaccination, Post Vaccination Monitoring (Disease investigation and serology)
- Review and revise and FMD control strategic plan

FMD Zone Free (Sabah Sarawak)

- Sample serology
- Sampling clinical FMD freedom

FMD PREVENTION AND
CONTROL ACTIVITIES

Constraints &
Solutions

Constraints

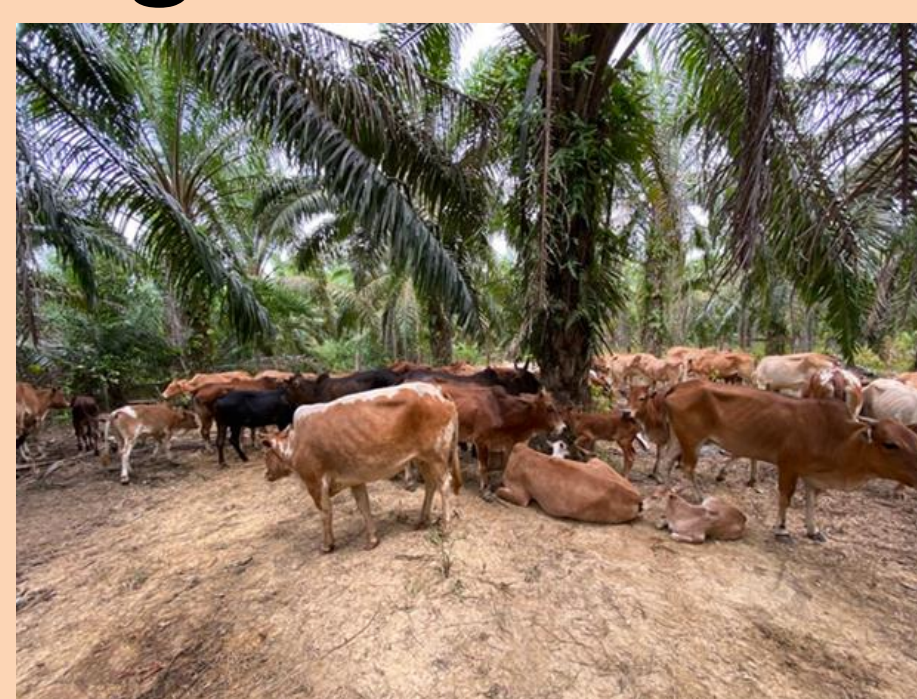

- Insufficient budget for vaccine procurement
- Insufficient Manpower

Solutions

- Extra funding from federal and local government through development and operational budget (new policy)
- Contract workers

- FMD free by vaccination zones (Island of Langkawi, Three districts of Johor the southern Peninsular Malaysia; Johor Bahru, Pontian and Kulai)
- Involvement of the states government to improve budget
- Encourage private to procure their own vaccine
- Enquire more affordable price of vaccine
- Improve import protocols
- Improve border control to reduce illegal movement

Way Forward
